ACRYLIC LASER CUTTING

Laser technology is a futuristic way of cutting acrylic. Several industries have started using it for cutting acrylic materials to create a range of

- Signage
- Acrylic trophies
- Automobile parts
- Novelties and gifts
- Pharmaceutical items
- Advertising kits
- Letters

CNC PLASMA CUTTING

CNC custom plasma cutting is a process that uses a plasma torch controlled by a computer to cut through electrically conductive materials. It's celebrated for its ability to produce clean, precise cuts with minimal heat input, making it ideal for a variety of materials including plasma cut steel and plasma cut aluminum. The process is not only efficient but also highly adaptable, accommodating complex shapes and designs with ease.

LASER WELDING

Advertising laser welding machine have small welding spot, joint firmness for metal word connection , widely used in signage making ,metal word production and advertising display production company .

LETTER BENDING

Letter bending machine is to automatically and precisely bend metal strips into 3D channel letters for signs, reducing manual labor and increasing production speed. These machines cut, bend, and sometimes flange materials like aluminum, stainless steel, and galvanized steel to create accurate, high-quality letters for both indoor and outdoor advertising.

DIGITAL PRINTING

Digital printing press is to produce high-quality printed materials directly from digital files, making it ideal for short print runs, on-demand printing, and customization. It offers faster turnaround times, lower setup costs compared to traditional methods, and the flexibility to personalize each print. This makes digital presses suitable for a wide range of applications, including marketing materials, business cards, books, packaging, and labels.

UV DTF PRINTING

Custom apparel and accessories , Promotional products, Personalized gifts, Industrial labeling, Home décor and signage
